HeatCo[®]
I n t e r n a t i o n a l

Dr. Sarwat Sebeih

Founder of Heatco

مؤسس شركة هيتكو

HeatCo®
International

About Us

Heatco international is a leading boiler manufacturer in Egypt since 1971, holding a major market share in the boiler manufacturing and central heating business since the cross-tube steam boilers.

Now we have a great variety of products serving all heating applications in nearly all industrial, domestic, health care and entertainment business.

All of our products are designed, built and examined according to international standards, along with the full technical support before, during and after delivery to match our customers' needs and their full satisfaction.

شركة هيتكو هي شركة رائدة في مجال صناعة الغلايات في جمهورية مصر العربية منذ عام ١٩٧١ , تمتلك حصة سوقية كبيرة في مجال الغلايات و انظمة التدفئة المركزية .
اليوم لدينا متنوع هائل من المنتجات التي تخدم تطبيقات التسخين في جميع مجالات الصناعة , الاستخدامات المنزلية و العناية الصحية و المجالات الرفيحية .
جميع منتجاتنا يتم تصميمها و صناعتها و اختبارها طبقا لاكواد عالمية , مع تقديم الدعم الفني اللازم قبل و اثناء و بعد البيع لارضاء و موافقة احتياجات العميل .

HeatCo®

Cross-tube Steam Boiler

In The Late 1980's, The Factory Was Upgraded With CNC, Plasma Cutting And Welding Machines, To Produce According To The TÜV Standard, And Became The Biggest Supplier Of Boilers And Storage Tanks To The Armed Forces And Hospitals In Egypt, And Started A Partnership With Tipton Oklahoma In The Solar Concentrators Manufacturing.

في اواخر الثمانينات تم تطوير المصنع ليحتوي على ماكينات CNC و ماكينات قطع لحام بلازما للتصنيع و الانتاج طبقا لل TÜV Standard أصبحت بذلك الشركة اكبر مورد للغلايات و الخزانات للقوات المسلحة و المستشفيات في مصر. و بدأت شراكة مع شركة Tipton Oklahoma في تصنيع مجمعات الطاقة الشمسية

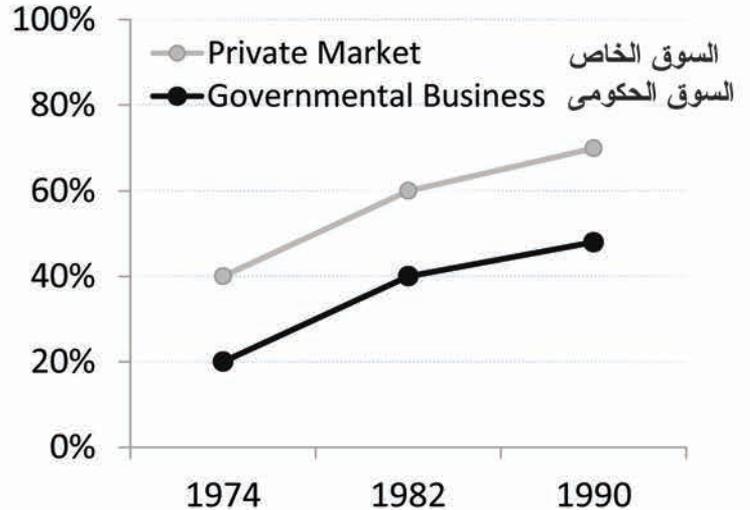

In The Early 1990's, Heatco Started Exporting To The Arab Countries, And Founded A Branch In KSA Called " Al Ameriia ", And Became Heatco International في بداية التسعينات بدأت شركة هيتكو في التوريد للدول العربية و أسست فرع بالمملكة العربية السعودية باسم الاميرية ثم أصبحت هيتكو انتينرناشيونال

In 1971 , Heatco Started Producing Remote Areas Vertical Cross-tube Steam Boilers, Fired By Wood And Agricultural Wastes, Used By The Small Spinning And Weaving Workshops Where Electricity And Fossil Fuel Were Not Present.

In 1974, Heatco Was The First Private Company To Get A Manufacturing License, Started Producing Multi Pass Horizontal Fire Tube Boilers, Competing With The Huge Governmental Company "Al Maragel " .

Acquiring About 40% Of The Private Market, 20% Of The Governmental Business Back Then.

في عام ١٩٧٤ كانت شركة هيتكو اولى الشركات الخاصة التى تحصل على رخصة تصنيع غلايات افقية متعددة المسارات منافسا بذلك شركة المراجل البخارية الحكومية العملاقة حائزين على نسبة ٤٠٪ من الحصة السوقية بالقطاع الخاص و نسبة ٢٠٪ من الحصة السوقية بالقطاع العام)

Solar Collectors Arrangements

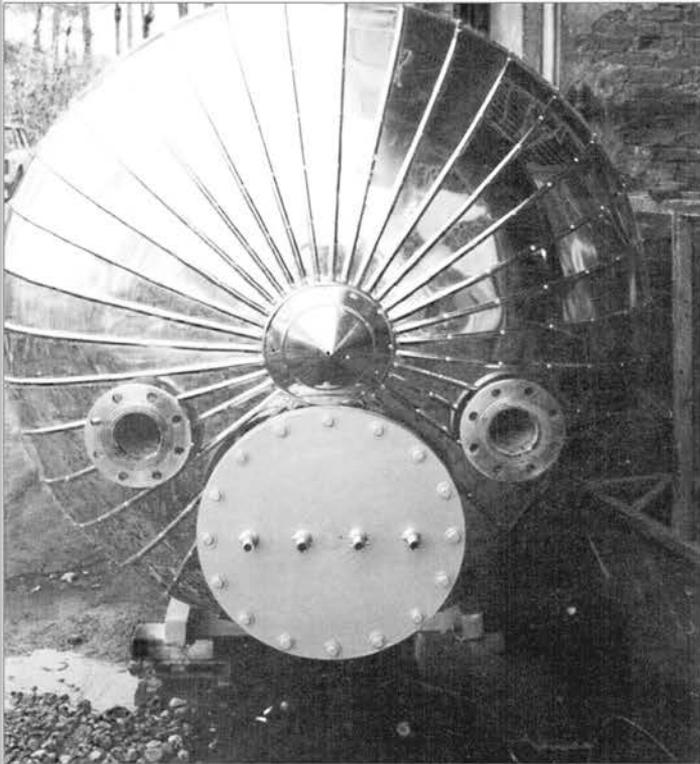

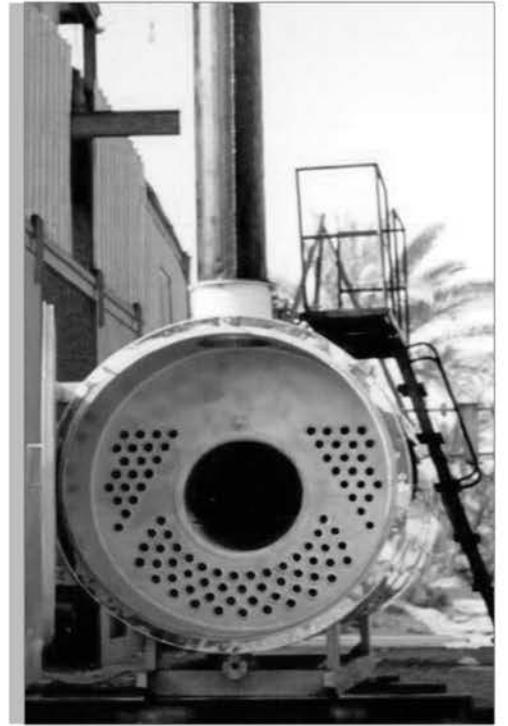

مجمعات طاقة شمسية

HeatCo®

In The Late 1990's And The Beginning Of The Millennium, Heatco International Expanded The Business By Contributing In The Major Industries That Started To Grow In Egypt, Like The Hospitals Tourism, Pharmaceutical, Food And Beverages Spinning And Weaving, Chemicals And Heavy Industries All Over Egypt . Heatco International Then Started Another Partenership With The Leading German Boiler Manufacturer "HAGGER KESSEL" And Started Producing Its Products According To The New Approved Designs, And Third Party Approvals Like The "Lloyd's Register" , And Egyptian Universities Like Ain Shams And Cairo Universities , Whom Trusted Heatco's Boilers As An Educational Equipments In Their Labs.

بدأت بعد ذلك شركة هيتكو انتينرناشيونال في الشراكة مع شركة تصنيع الغلايات الالمانية "HAGGER KESSEL" و بدأت في انتاج منتجاتها طبقا لتصميمات جديدة معتمدة و هيئات اشراف مثل "Lloyd's Register" و كليات الهندسة بالجامعات المصرية مثل جامعة عين شمس و جامعة القاهرة الذين يتقون في معدات هيتكو كمعدات تعليمية في معاملهم

Paying A Lot Of Attention To The After Market Services, Allowed Heatco International To Be Rewarded With The "Century International Quality ERA" Reward For The After Sale Service Held In Geneva 2011.

كان اهتمام شركة هيتكو انتينرناشيونال بخدمات ما بعد البيع الفضل في حصول الشركة على جائزة "Century International Quality ERA" لخدمات ما بعد البيع في جنيف عام 2011 .

Heatco International Is Now A Partner With A Lot Of Leading European Companies Like Roth Werke Gmbh, Giacomini S.P.A.

Cordivari Srl, Coterm UK, Radiatori 2000 S.P.A., NUOVA IMAS Srl,

شركة هيتكو انتينرناشيونال حاليا هي شريك لكثير من الشركات الاوروبية الرائدة مثل شركة Roth Werke Gmbg , شركة Cordivari Srl , شركة Giacomini SPA , شركة Radiatori 2000 SPA , شركة Coterm NOUVA IMAS Srl

The Design

Three pass fire smoke tube system
 Functional Cylindrical For optimum
 Pressure resistance
 Special - purpose injector for effective and
 internal return temperature boost integrated in
 the boiler apex
 Inspection ports viewing the water space

Extremely low radiation losses
 Suitable for all heating system
 Extremely low back pressure
 Efficiency is maintained through
 out the range of load even at part
 load all the energy is converted in
 to heat
 Maintenance is kept to minimum

Horizontal 3 Pass Fire Tube Steam Boilers

Construction

Three pass fire tube system
 Fully opening swivel - mounted
 boiler front door for easy cleaning
 inspection
 Insulated with mineral wool mats
 underneath stainless steel cladding

HeatCo[®]
 International

ASME Code design and construction {Upon Request}

Testing

The metallic components are tested by
 ultra sonic inspection while the welds
 are checked by means
 of radiographic scannings and penetrants

POOL BOILER

H E A T C O

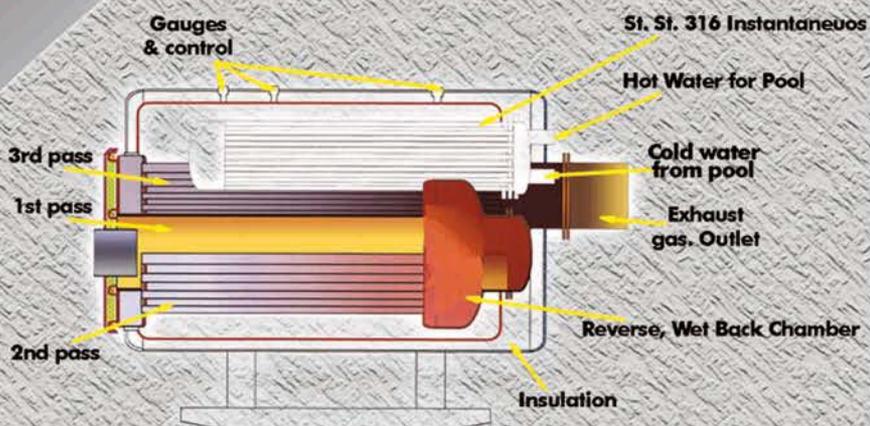

Pool Boiler Pb is one of latest, packaged type Hot water boiler Which meets both industrial regulation for operation and domestic regulation for safety.

Pool Boiler

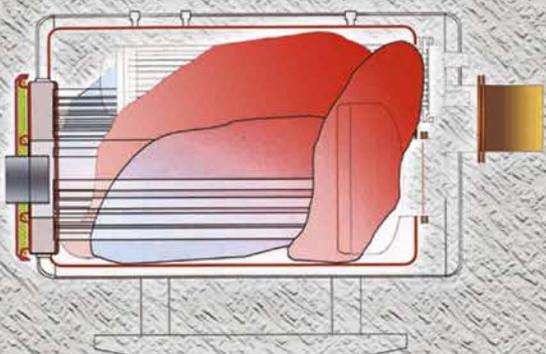

3 Pass, Fire tube, Wet Back Boiler

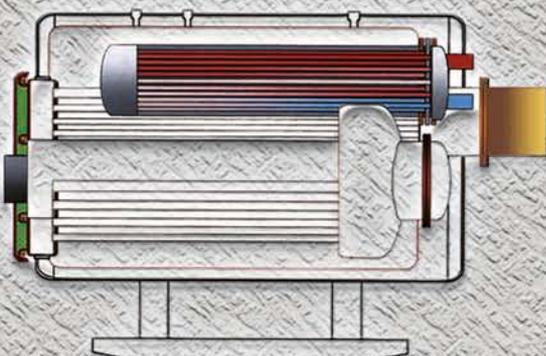

Advantages:

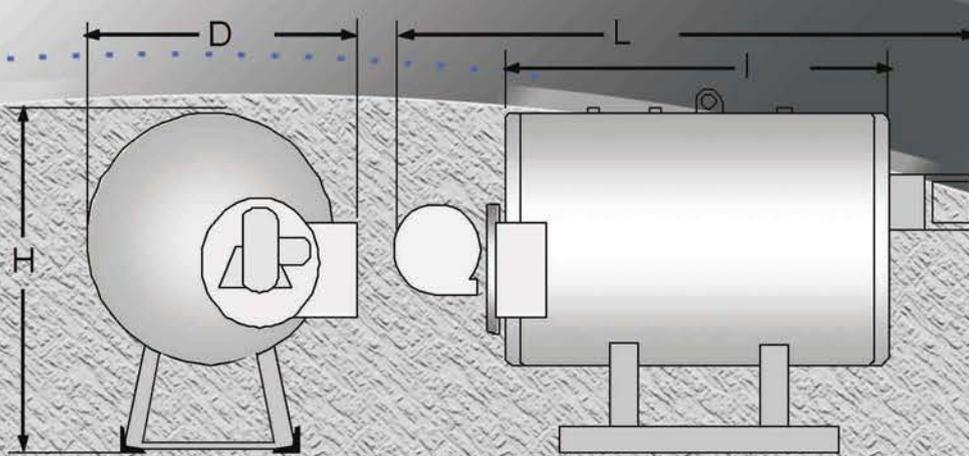

- No need for primary circulating pumps.
- No need for piping Network and insulating.
- No need for boiler room.
- No need for main control panel.
- Easy installation and connection.
- 3 years warranty.
- Spare parts available in stock.
- Sound proof : 67db (A) max.
- Low NOx emission.
- 20 years life time.

Hot water medium fluid

Technical Data.

- 1- 3 pass, fire tube, wet back boiler
- 2- Instantaneous st. st. 316 U. tube heat bundle Heat Exchanger for Swimming Pool
- 3- For Boiler working pressure - 1bar , testing pressure 4 bar.
- 4- For Heat Exchanger working pressure - 6 bar , testing pressure 10 bar.

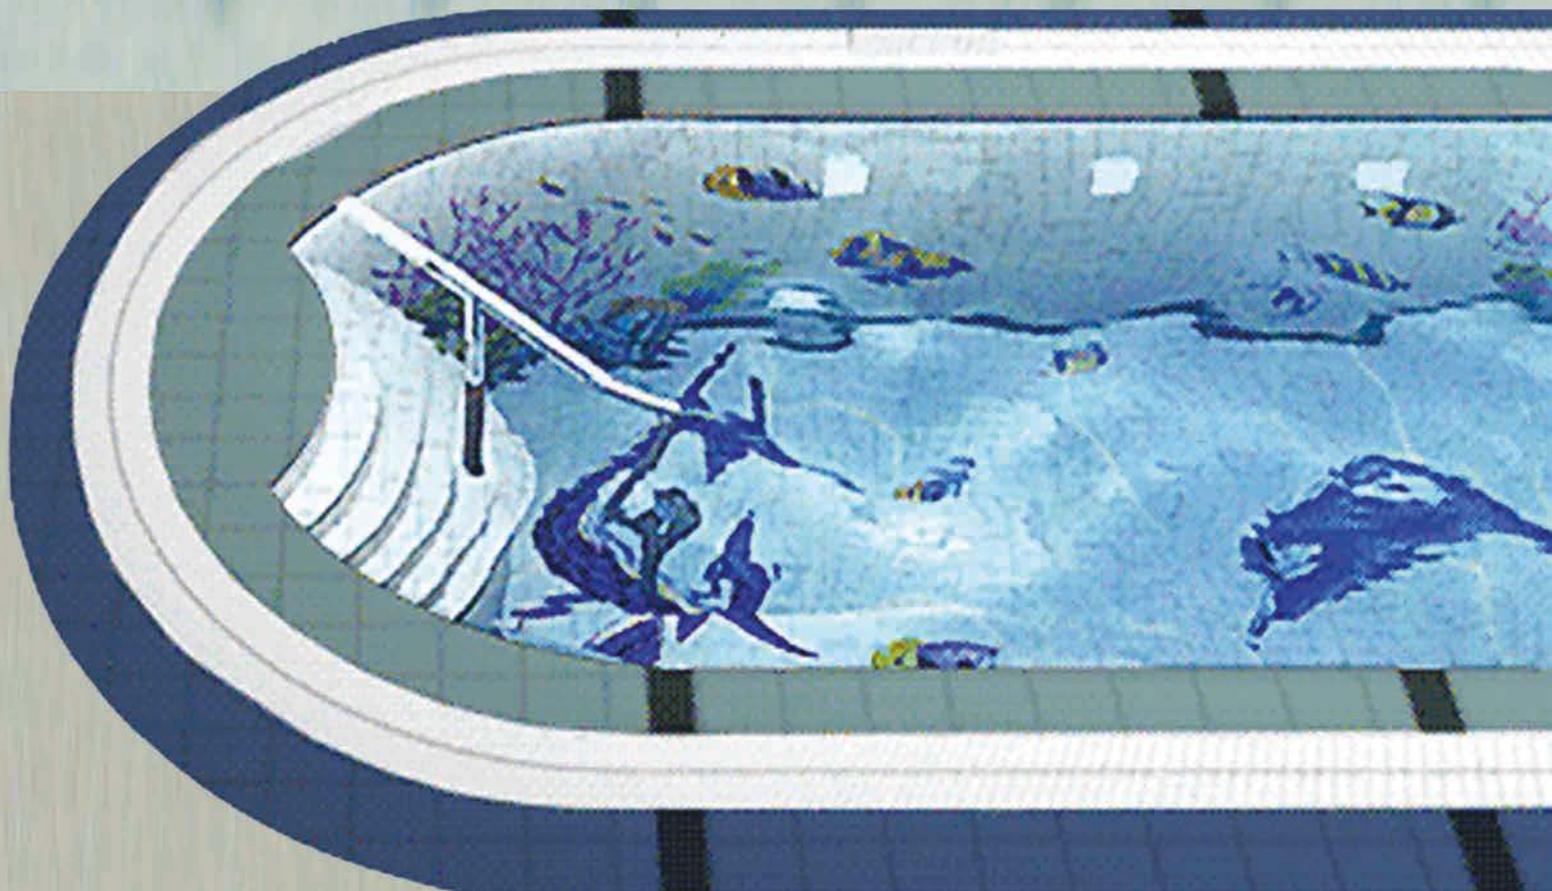

Design , according to TRD (German Standard)
 Approval for design from TUV (Germany)
 Material according to DIN
 Boiler body and accessories are CE

Uses for heating swimming pools volume starting from 40 m³ up to 3300 m³ with any kind of water quality (Even Sea Water).

Fuel Type : Light Oil, Natural Gaz, LPG

The Latest Upgraded Stainless Steel Hot Water Boiler

Are You Prepared to be Surprised by a new product?

Well, we have Just developed a unique product that does the Following :

- >Instantaneous hot water.
- >Saving Fuel consumption.
- >Safe & Doesn't make any noise or vibration.

Our Company is the greatest in boilers field and Signs production in Egypt, Middle East and North Africa. In reference to our long experience we capable to undertake all kinds of Designs, Manufacturing assembling , Installing in all fields of boilers and heating Systems

Smart Boiler is one of the latest & smallest type, hot water boiler built by real boiler Maker 1971.

This product applicable for more uses such as Residential, swimming pool, Central Heating and Laundry, ... moreover It can be used for Several operation at the same time,

With the Smart Boiler you can reduce cost and increase efficiency as much as (93%)

Available with different fuels like (light Oil, Natural gas And L.P.G) with low running cost .

SWIMMING POOL

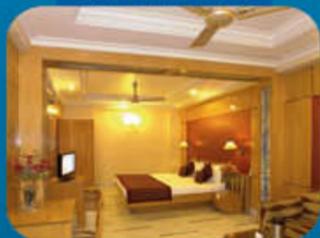

VILLAS

SPORTS CLUBS

HEALTH CLUBS

HOTELS

HEATING SYSTEMS

KITCHENS

LAUNDRY

تستخدم في

- تدفئة حمامات السباحة بمختلف أحجامها .
- الفنادق والقرى السياحية .
- النوادي الرياضية والصحية .

مميزات الخلايا

- صغيرة الحجم .
- كفاءة عالية .
- سرعة التسخين وأمنه .
- تكلفة تشغيل قليلة .

صديقة البيئة :

- لا تنتج اي أدخنة او روائح
- لا تصدر أصوات
- لا تصدر إهتزازات

إقتصادية :

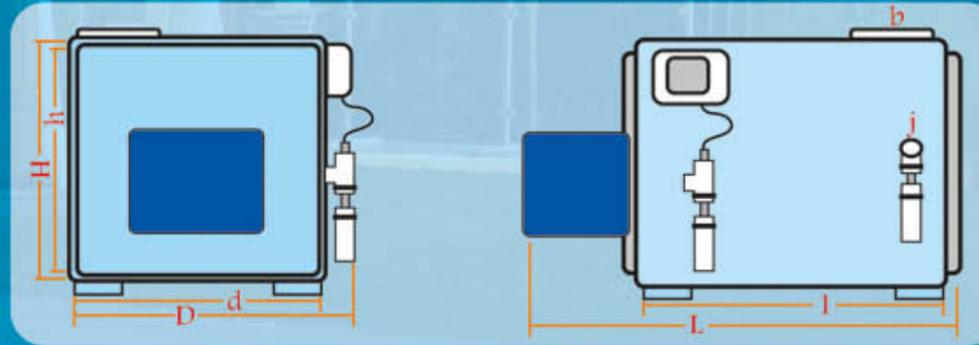

- لا تحتاج لصيانة .
- لا تحتاج لغرفة خاصة توضع بها .

الوقود اللازم :

- السولار .
- الغاز الطبيعي .

STAINLESS STEEL BOILER

STEAM GENERATORS

GPT MODEL

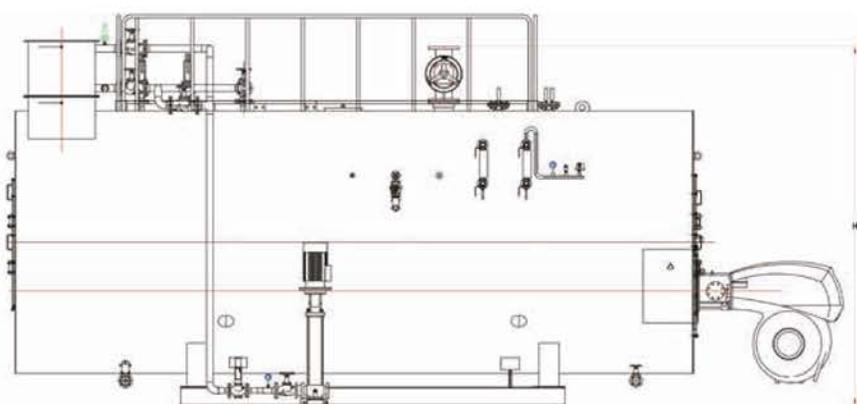

The model **GPT** is a 3-passes boiler with wet back wet. It can produce from 3,000 to 25,000 kg of steam per hour with a pressure up to 21 barg. It's used both for liquid and gaseous fuels and it allows a two-position regulation or in a modulating version both on fuel and on feed water.

This model, which represents the most technologically advanced on the market today, has been thoroughly engineered to ensure maximum efficiency (up to 95% efficiency using GN-ECO economizers) and minimum NOx emissions, according to the main environmental protection regulations.

The high-volume and high-performance GPT steam generator is recommended for those industries which require flexibility of operation, steam reserve, safety and continuity. It represents the ideal boiler for chemical, pharmaceutical, milk, food and paper industries, and for all installations which demand an absolute guarantee of the components, an impeccable and cured construction, and a sizing that consider harsh operating conditions.

PRODUCT

- Steam generators, fire tube, 3 passes, up to 21 barg

TPOLOGY

- Fire tube • 3 passes • Wet back • Through furnace • Horizontal

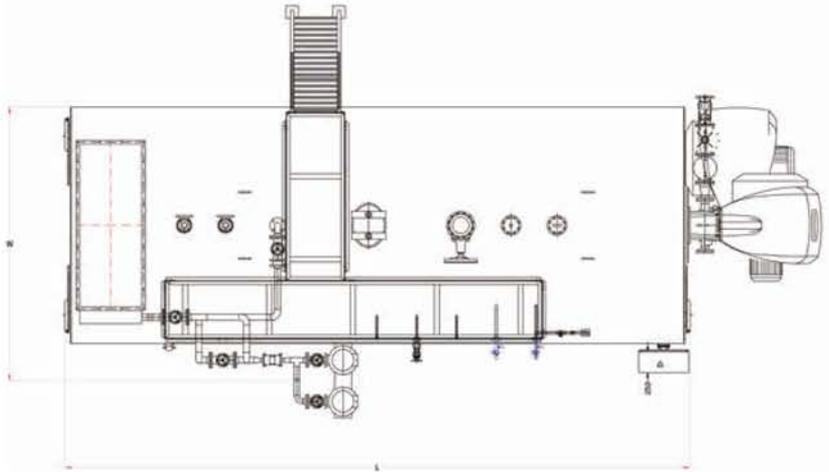

CAPACITY

- 3,000 kg/h – 25,000 kg/h

HOT WATER HEATERS
**NPR
MODEL**

Pressurized steel boiler for hot water production.

It can be equipped with a normal market burner and is suitable for liquid or gaseous fuels. Two-position adjustment or, on request, modulating. Water efficiency of over 90%.

PRODUCT

- Pressurized heater for hot water

TYOLOGY

- Fire tube • 3 passes • Wet back • Flame inversion • Horizontal

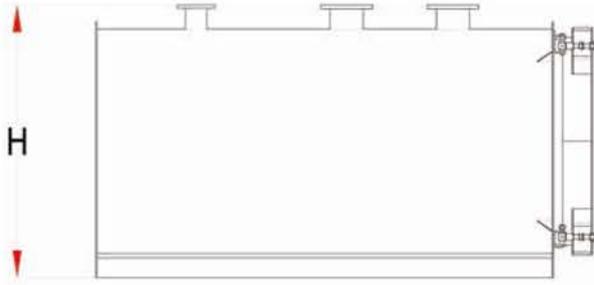

CAPACITY

- 64 kW - 7,000 kW

Heat Exchanger

Plate Heat Exchanger

RANGE

PHC Plate to plate Exchangers range is composed by 4 sizes, each one combined with innumerable number of plates, giving suitable solutions to several application of the HVAC industry.

In particular PHC 3120 plate allows an output from 43kw to 370kw with high delta T (80°C primary circuit and 10°C to 45°C on the secondary). With similar energy request but different and lower delta T, the PHC 4620 and PHC 7420 shall be selected.

For big output request version PHC 7431 is recommended.

The following tables shall be considered as merely indicative tool, for an optimized designing of Heat exchanger Dimension, our technical department will support you on every request.

domestic application, the PHC are suitable for district heating installation.

TECHNICAL INFORMATION

PHC exchangers are inspectionable plate to plate type. Their shape ensures the possibility of open the exchanger for cleaning.

The modular design allows you to change the configuration of the exchanger even after a period of use (within certain limits).

PHC exchangers are designed for the use stated on Art. 3.3 of PED 97/23/CE.. In particular, they are intended to be used with non-dangerous liquids with steam pressure at maximum operating temperature not exceeding 0.5 bar above normal atmospheric pressure.

Every Exchanger has serial number label and end-user manual.

MAXIMUM OPERATING CONDITIONS

Max. Pressure= 10bar

Max. Temperature= 140°C (to be intended as max working temperature of gaskets).

Pressure not exceeding 0.5 bar above normal atmospheric pressure.

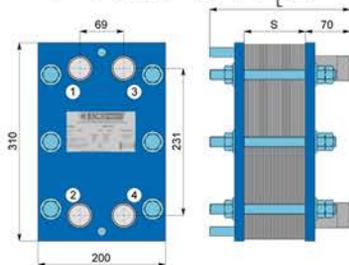

MATERIAL

- Frame (not in contact with fluids) in painted mild steel
- Guide for Heat exchanger plates, bolts and screw nuts (not in contact with fluids) in galvanized mild steel
- Nipples and plates (in contact with fluid) in 316L Stainless Steel
- EPDM Gaskets

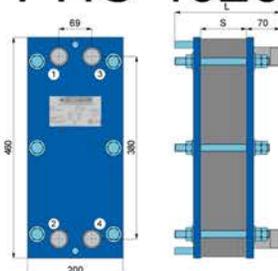

APPLICATION

PHC Heat exchangers are used in domestic and industrial installation. In particular they're suitable for production of D.H.W., as well as for heating of swimming pools using different energy sources (traditional boiler, solid fuel, solar thermal system). For

	WPmax	WTmax	WPmax	WTmax
500 ÷ 1000	8 bar	90 °C	6 bar	165 °C
1500 ÷ 5000	6 bar			

APPLICATION

Production and storage of sanitary hot water for domestic and industrial uses.

MATERIAL

Material and finishings, suitable drinkable water according to D. M. n. 174 dated 06.04.04.;

- Mild steel Polywarm[®] coated (certification ACS - SSICA - DVGW - W270 - UBA - WRAS)
- Galvanized version (on request)

HEAT EXCHANGER

The thermal exchange is ensured by the innovative Heat Exchanger for legionellosis-prophilaxis, with tubes bent to the bottom (available on Stainless Steel 316L or Copper)

INSULATION

NOFIRE[®] 50 mm soft polyester fibre 100% made of recyclable material, with high Thermal insulation and Thermal conductivity: **0.035 W/mK**. Fire resistance class **B-s2d0** according to **EN 13501**.

Grey PVC external lining complete with top and flange cover.

CATHODE PROTECTION

- Polywarm[®]: magnesium anode with Anoden-tester
 - Galvanized: magnesium anode
- For capacity > 1500lt n° 2 magnesium anodes.
Electronic anode on request (see accessories).

DRAIN

External confluence through drain connection.

For capacity > 1t 1000 external confluence through drain pipe.

GASKET- FLANGE PLATE

- Silicone gaskets suitable for alimentary use for max temperature up to 200 °C. (D.M. n.174 dated 2004)
- Flange plate.

WARRANTY

- 5 years (Polywarm[®])
- See general sales conditions and warranty

ITALIAN HEATERS

Boiler For heating systems

CONVENTIONAL FLUE WATER HEATERS

The range of water heaters are **conventional flue** type, tested and certified for use with natural gas and LPG.

The range have **piezo ignition**, high limit stat, control stat and are equipped with stainless steel bur-ner offering a high level of efficiency. This operates in conjunction with a **permanent pilot** and thermocouple. The **gas valve** is fitted with a thermostat and an **ECO** (Energy Cut Off), which is activated in the event of thermostat failure.

There is also a **magnesium anode** fitted for added protection against corrosion. The **insulation** is in high density mineral glass wool between the storage tank and outer casing.

The range of water heaters must be installed in such a position as to allow adequate air supply for combustion and ventilation.

The range can be installed in a **singular** or **multiple** configuration. By linking more units together will increase the storage capacity as well as the **continuous output**, thus catering for the most demanding of applications. All units are free standing and need very **little installation**, with connections to water, gas, and the flue system required.

ELECTRONIC GAS WATER HEATERS

The **electronic** version of the conventional flue range. This range is equipped with an **electronic gas valve** with flame ionization instead of a pilot flame.

The heaters are fitted with a **flame sensing electrode** and **safety thermostat**. It is also possible to programme the water heater if peak demands are required at certain times in the day.

Additionally, the water heater can be connected to BMS (**Building Management Systems**) with volt free contacts.

The range offers **lower running costs** as important advantage over the permanent pilot

There is also a magnesium anode fitted for added protection against corrosion.

The range of water heaters must be installed in such a position as to allow adequate air supply for combustion and ventilation.

Pacemaker® Water Heaters

Pacemaker

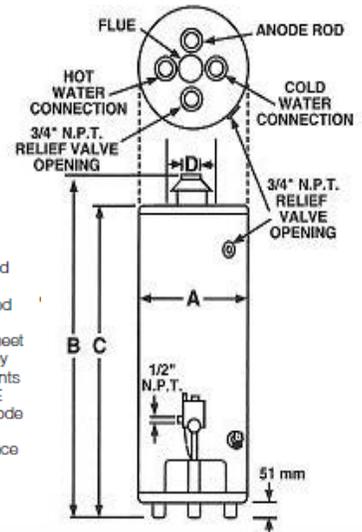

Available in 114, 151, 189, 284 and 379 Liter Tall, 114 and 151 Liter Short Models

- Temperature and pressure relief valve included
- R-Foam® insulation process for superior heat retention
- Gasmaster™ burner with precision port alignment for even heat transfer
- Heat saving flue baffle design
- Model specific burners engineered for high BTU input
- LP models feature durable stainless steel burners designed specifically for LP gas and Robertshaw® controls
- Side relief valve connection
- Maximum working pressure of 150 PSI (10 BARS)

Plus...

- Easy to light – no matches required
- EverKleen™ patented system fights sediment build-up
- Brass drain valve and temperature and pressure relief valve are included
- Standard replacement parts

Units meet or exceed ANSI requirements and have been tested according to D.O.E. procedures. Units meet or exceed the energy efficiency requirements of NAECA, ASHRAE standard 90, ICC Code and all state energy efficiency performance criteria.

LAST 5 ERRORS

USER FRIENDLY

A NEW DESIGN, MODERN AND PRACTICAL ENHANCES DIGITECH® TR, THE STEP FORWARD OF THE RADIANT ELECTRONICS.

DIGITECH TR is now our standard among all the classic units. DIGITECH TR provides immediate information and constant interaction with the end user. By pressing the **button "i"** all the functions are displayed and enables the end user to adjust all parameters to meet the various needs. The newly added function **MEMORY displays** the last 5 errors of the PCB, thus making it easier the service of the appliance. The new control panel features a new

LCD display, blue back-light, and run the various temperatures of different zones, sensors and the other items of a solar loop: tank, pump and solar panels without the need of a remote control.

RAVENHEAT[®]

Condensing Boiler

The First CE Certified Boiler In Egypt

5 YEARS
WARRANTY*

HeatCo[®]
International

CE1312

Built to exacting ISO 9001 standards using quality components, carrying the European CE mark. Each appliance undergoes a rigorous testing and operating procedure before being carefully packed for maximum protection, ready to leave our factory.

The HE combination boiler has a high resolution backlit LCD screen, featuring customer friendly buttons for optimum operation, making it easy to use in poor light conditions. This feature enables the user to easily set the heating and hot water temperatures, central heating times and view the system pressure.

Installer Benefits

- Installation approved by British and European law
- Brass and Premium Branded Components for Lasting Quality
- Stainless Steel main heat exchanger
- Fully accessible from the front making service easier
- Side clearance of only 1mm required
- Easy release control panel allows easy access for servicing nuisance freezing in winter
- Multi fix wall hanging bracket available (optional)
- Flexible condensation pipe for multi positioning discharge
- Lightweight design to aid installation
- Removable side panels
- Built-in automatic by-pass
- Anti-locking pump and valve feature

Customer Benefits

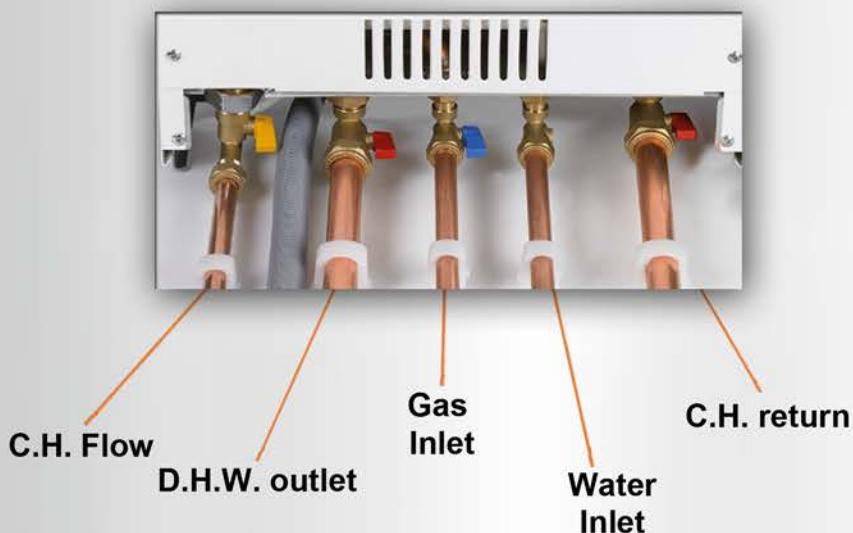

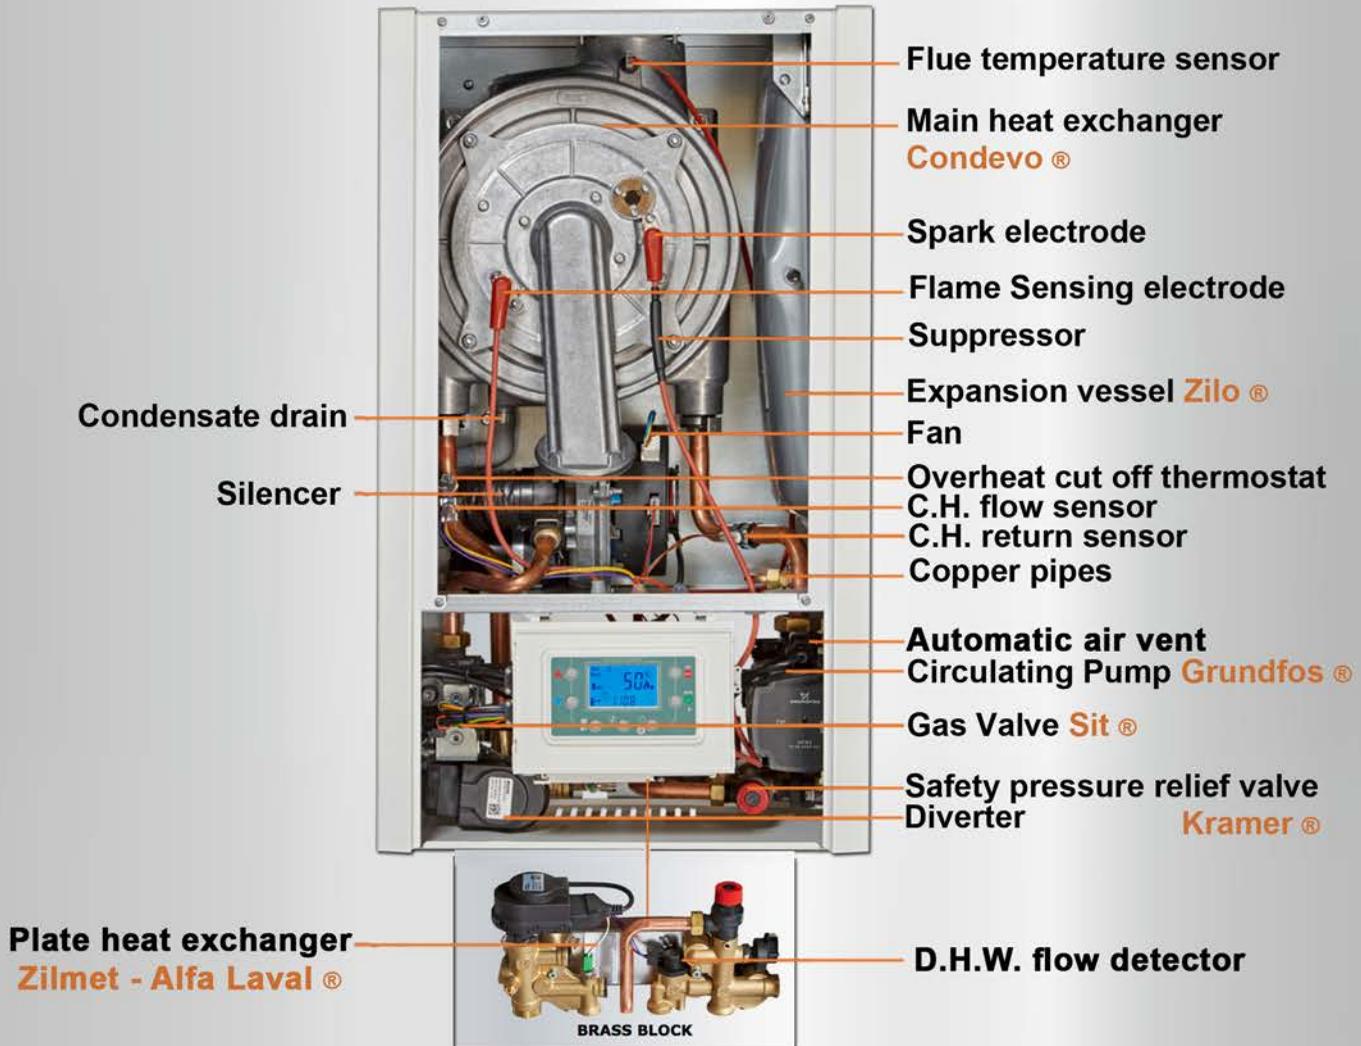

- SEDBUK A Rate
- 5 years warranty
- Opentherm Compatible
- Compact Size – H-700mm, W-400mm, D-250mm
- Fully ErP compliant
- Backlit LCD
- Whisper Quiet in Operation
- Built-in frost protection
- Integral colour coded valve kit eliminates unsightly valves below the boiler
- Less Natural Gas Consumption
- User friendly controls, simple and easy to use
- High density insulation
- DHW pre-heat function
- Minimum low power of only 3.7kW further reduces energy cost

Single Stainless Steel Coil Heat Exchanger

The stainless steel single coil heat exchanger will ensure constant water speeds over a long lifecycle, coupled with this being able to access the heat exchanger from the front facilitates ease of service through the lifecycle of the boiler. The coil itself is designed to have wide water ways which lessens the likelihood of debris build up in the heat exchanger, the absence of manifolds lengthens the life expectancy of the heat exchanger by reducing the number of weld points and the number of seals.

IT'S WHAT'S ON THE INSIDE THAT COUNTS

Condensing vs. Non-Condensing Boilers

A matter of efficiency

The main reason why condensing boilers are "better" than non-condensing ones is that they are at least 25% more efficient. Their level of efficiency is achieved by using waste heat in flue gas to preheat cold water entering the boiler, capturing more heat from the outside rather than the inside of a room. This way, the condensing boiler captures 10-11% more heat than non-condensing ones, can reach up to 90% efficiency and help you save on bills and reduce carbon dioxide emissions.

New non condensing boilers can reach up to 78% efficiency (which is the percentage of heat that is actually usable), while old ones usually don't go over 55-65%. Moreover, condensing combi boilers are more space-efficient since they don't need a water tank and can be stored in a kitchen cupboard.

Better for the environment

Condensing boilers significantly reduce carbon emissions: you can save up to 1,200kg of carbon a year by installing one in your home. For this reason, they are eligible for grants under the Green Deal, which can help you cover the installation costs.

	Condensing	Non - condensing
CE certified	✓	×
Sedbuk rate	A	E
Efficiency	98%	75%
Pump head	Modulating	On/off
Gas consumption	Low	High
Gas valve	Modulating	Not modulating
Condensing heat exchanger for high thermal flue transfer form gas to water	✓	×
Stainless steel plate heat exchanger for domestic hot water	✓	×
Built in frost protection	✓	×
Nox combination boiler	Low	High
Flue gas exhaust temp	Low temp.	High temp.

Safer for your home

Because condensing boilers are perfectly sealed for heat insulation, and capture air from the outside rather than the room where they're placed, there's basically zero risks of anything being sucked inside. There's also no risk of being in contact with toxic substances because the condensed liquid is disposed of via a pipe connected to the drainage system

Non - Condensing

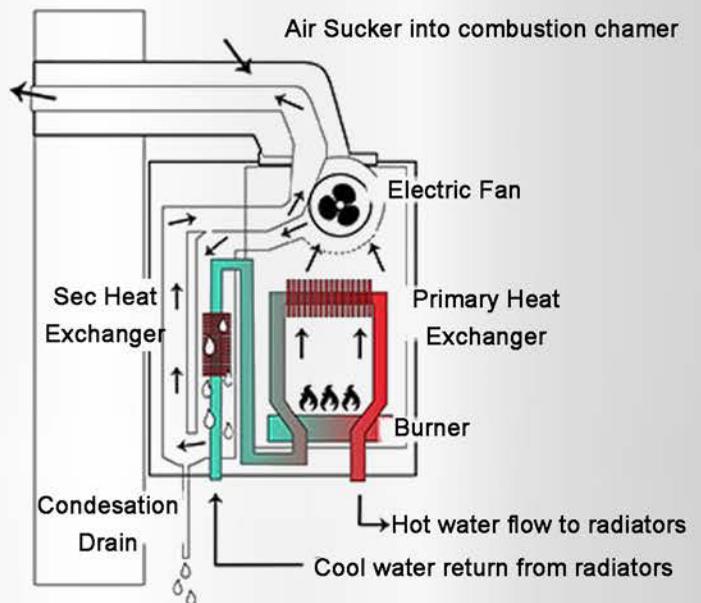

Exhaust gas is very hot and has a characteristic shimmer

Combustion gases pass over exchanger and into flue about 30% of the heat is wasted

Condensing

Flue - gas is not very hot and has a characteristic plume

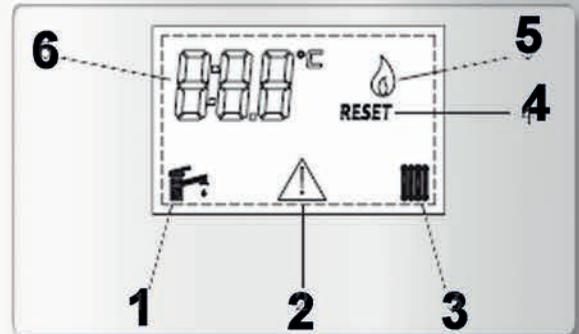

Combustion gases pass over primary heat exchanger and are then directed over secondary heat exchanger as the gases condense on the sides of the exchanger they release their heat

APPLIANCE STATUS INDICATORS

KEY:

1 - ON/OFF button.

Press to turn the boiler ON, summer mode (hot water symbol only), winter mode (hot water and radiator symbol), and OFF.

Press the button also to confirm selections.

2 - Press to RESET the appliance if ever an error code is displayed or ESC to exit from the boiler menus.

3/4 - Temperature and function mode selectors.

Press the arrow up or the arrow down to increase or decrease the central heating set-point temperature.

Press also to show the boiler values or to show the options program when the digital display is in INFO or in USER PARAMETERS.

5/6 - Temperature selectors.

Press the arrow up or the arrow down to increase or decrease the heating hot water outlet temperature.

2/6 - INFO: press together 2 and 6 buttons for show the boiler values and use the arrow up and arrow down buttons (3/4) to scroll.

- Flow temperature
- Domestic hot water temperature
- External temperature, if the external problem is present
- % power of modulation.

Press ESC to exit INFO mode.

- USER PARAMETERS (for service people): press the RESET and the arrow down buttons together (buttons 1 and 3).

Press the arrow up and arrow down buttons to show the boiler parameters.

- P001: C.H. max fan speed.

- P002: D.H.W. max fan speed.

- P003: Keep hot "0" disabled and "1" enabled

- P004: C.H. High/Low temperature:

"0" low (max 50°C) / "1" high (max 80°C)

- P005: Climatic curve: default "20" (full instructions are provided with the Outdoor Sensor Kit).

- P006: Enable locking pump "0" disable / "1" enable.

- P007: Test mode: "0" disabled, "1" enable. (the function is enable for maximum 15 minutes). Press ESC to exit Test mode.

- P008: Weather compensator control.

0= Normal remote control.

1= Ravenheat remote control with D.H.W. selection in boiler.

2= Honeywell remote control.

- P009: Ignition power. Is possible to set the soft start power level (% of max boiler power, range 0:99).

- P010: Boiler power selection

- P011: Boiler type

("1" instantaneous - "2" only heating). -

- P012: Gas type

("0" Natural gas - "1" LPG gas).

- P013: Modulating pump type selection

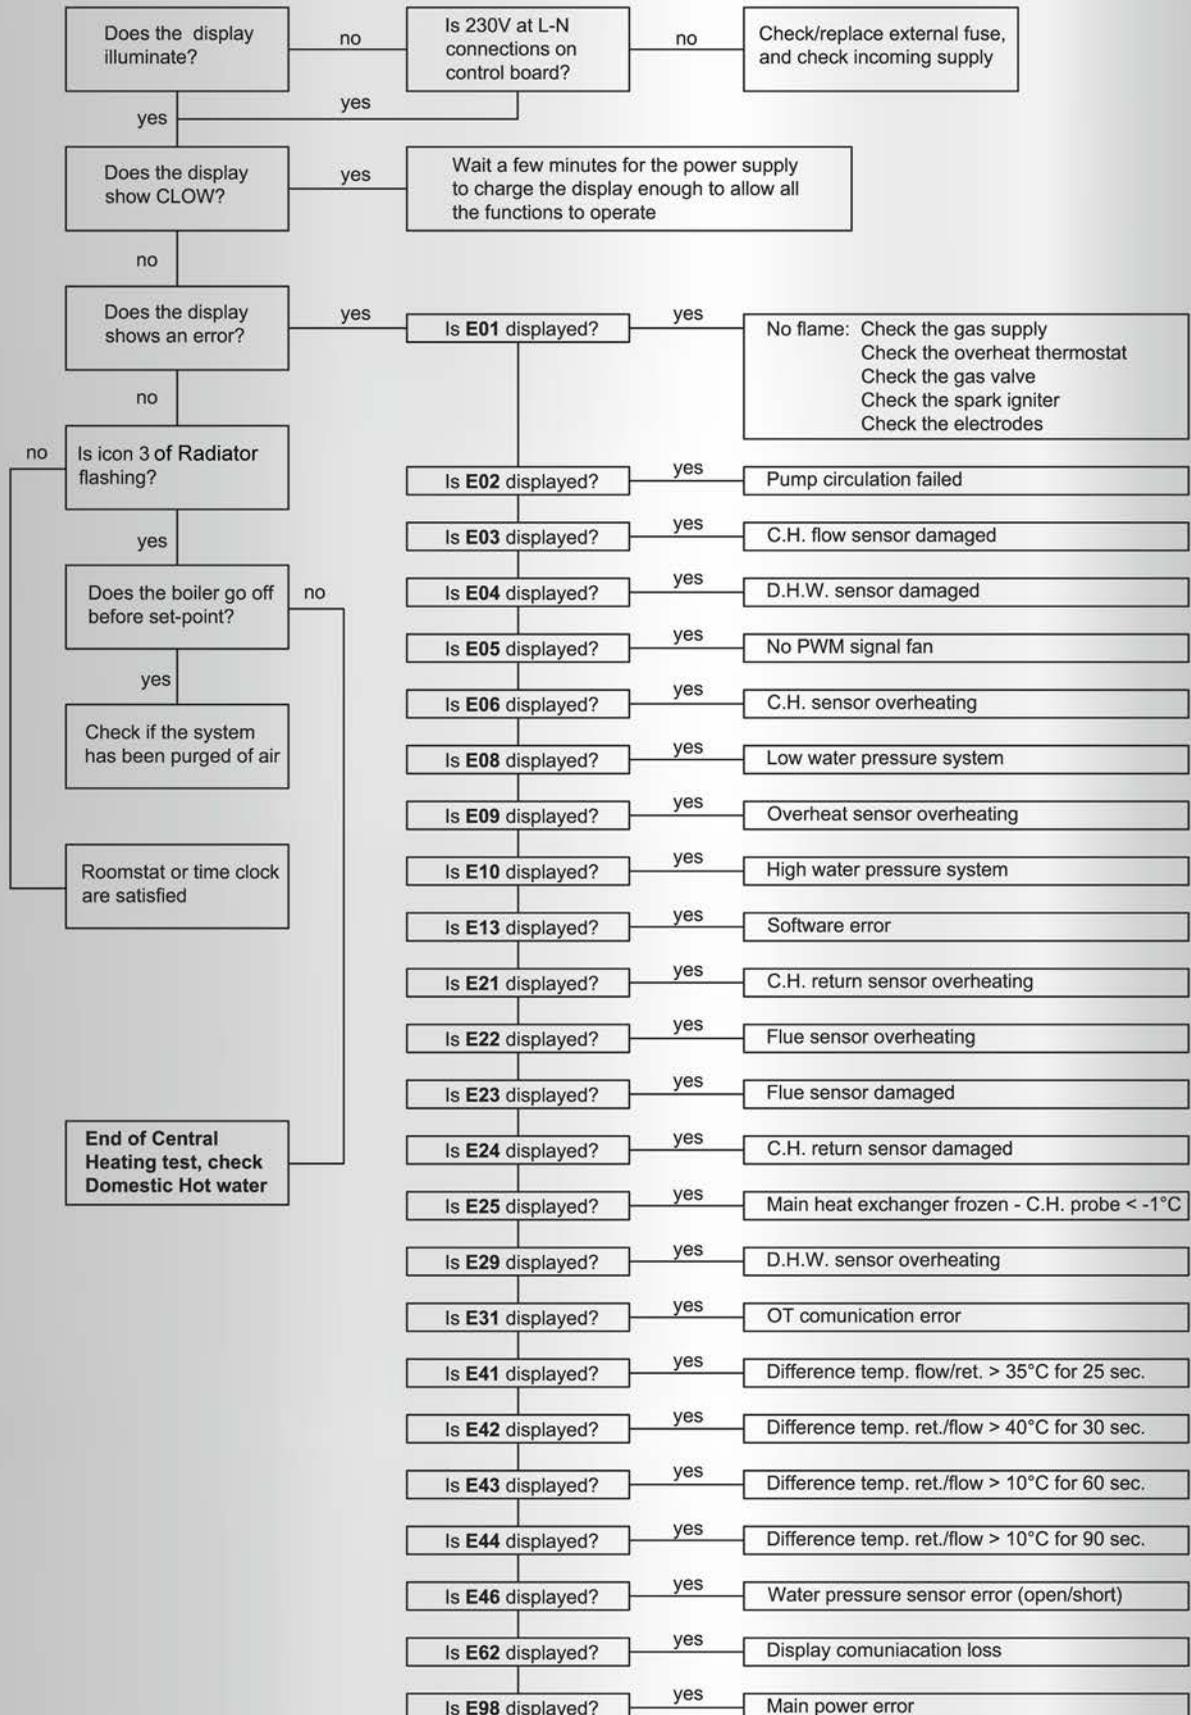

("0" Wilo - "1" Grundfos).

Press ESC to exit USER PARAMETERS mode.

FAULT FINDING CENTRAL HEATING

Before trying to operate the boiler make sure that: all gas supply cocks are open and the gas supply has been purged of air. The heating system pressure is at least 1 bar min to 1.5 bar max, select winter position on the digital display and set the central heating temperature to maximum.

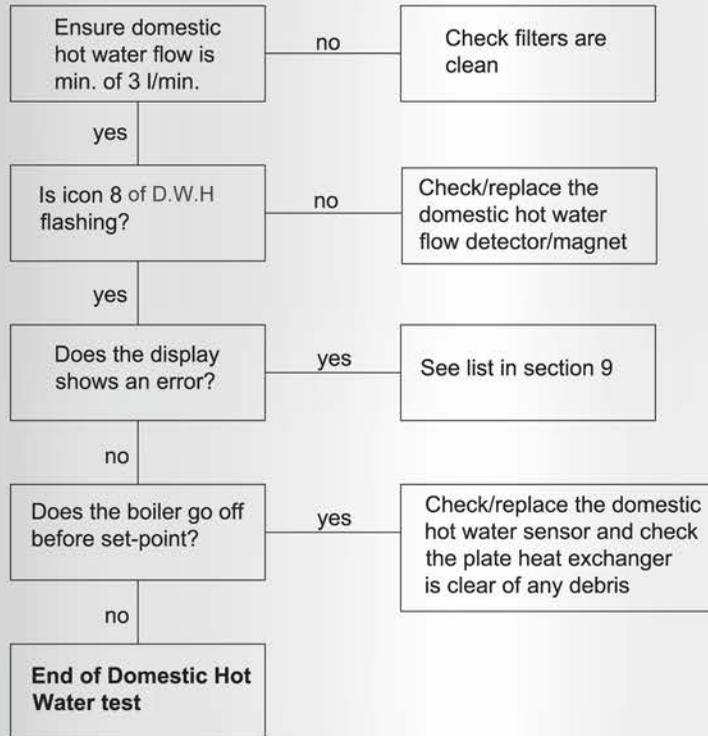

Ensure external controls are calling for heat (room thermostat/ digital clock) and check the following appliance operations:

FAULT FINDING DOMESTIC HOT WATER

After selecting the summer position on the digital display and setting the domestic hot water temperature to maximum.

Open the domestic hot tap and check the following appliance operations:

**HEATING
AND COOLING
UNDERFLOOR SYSTEM**

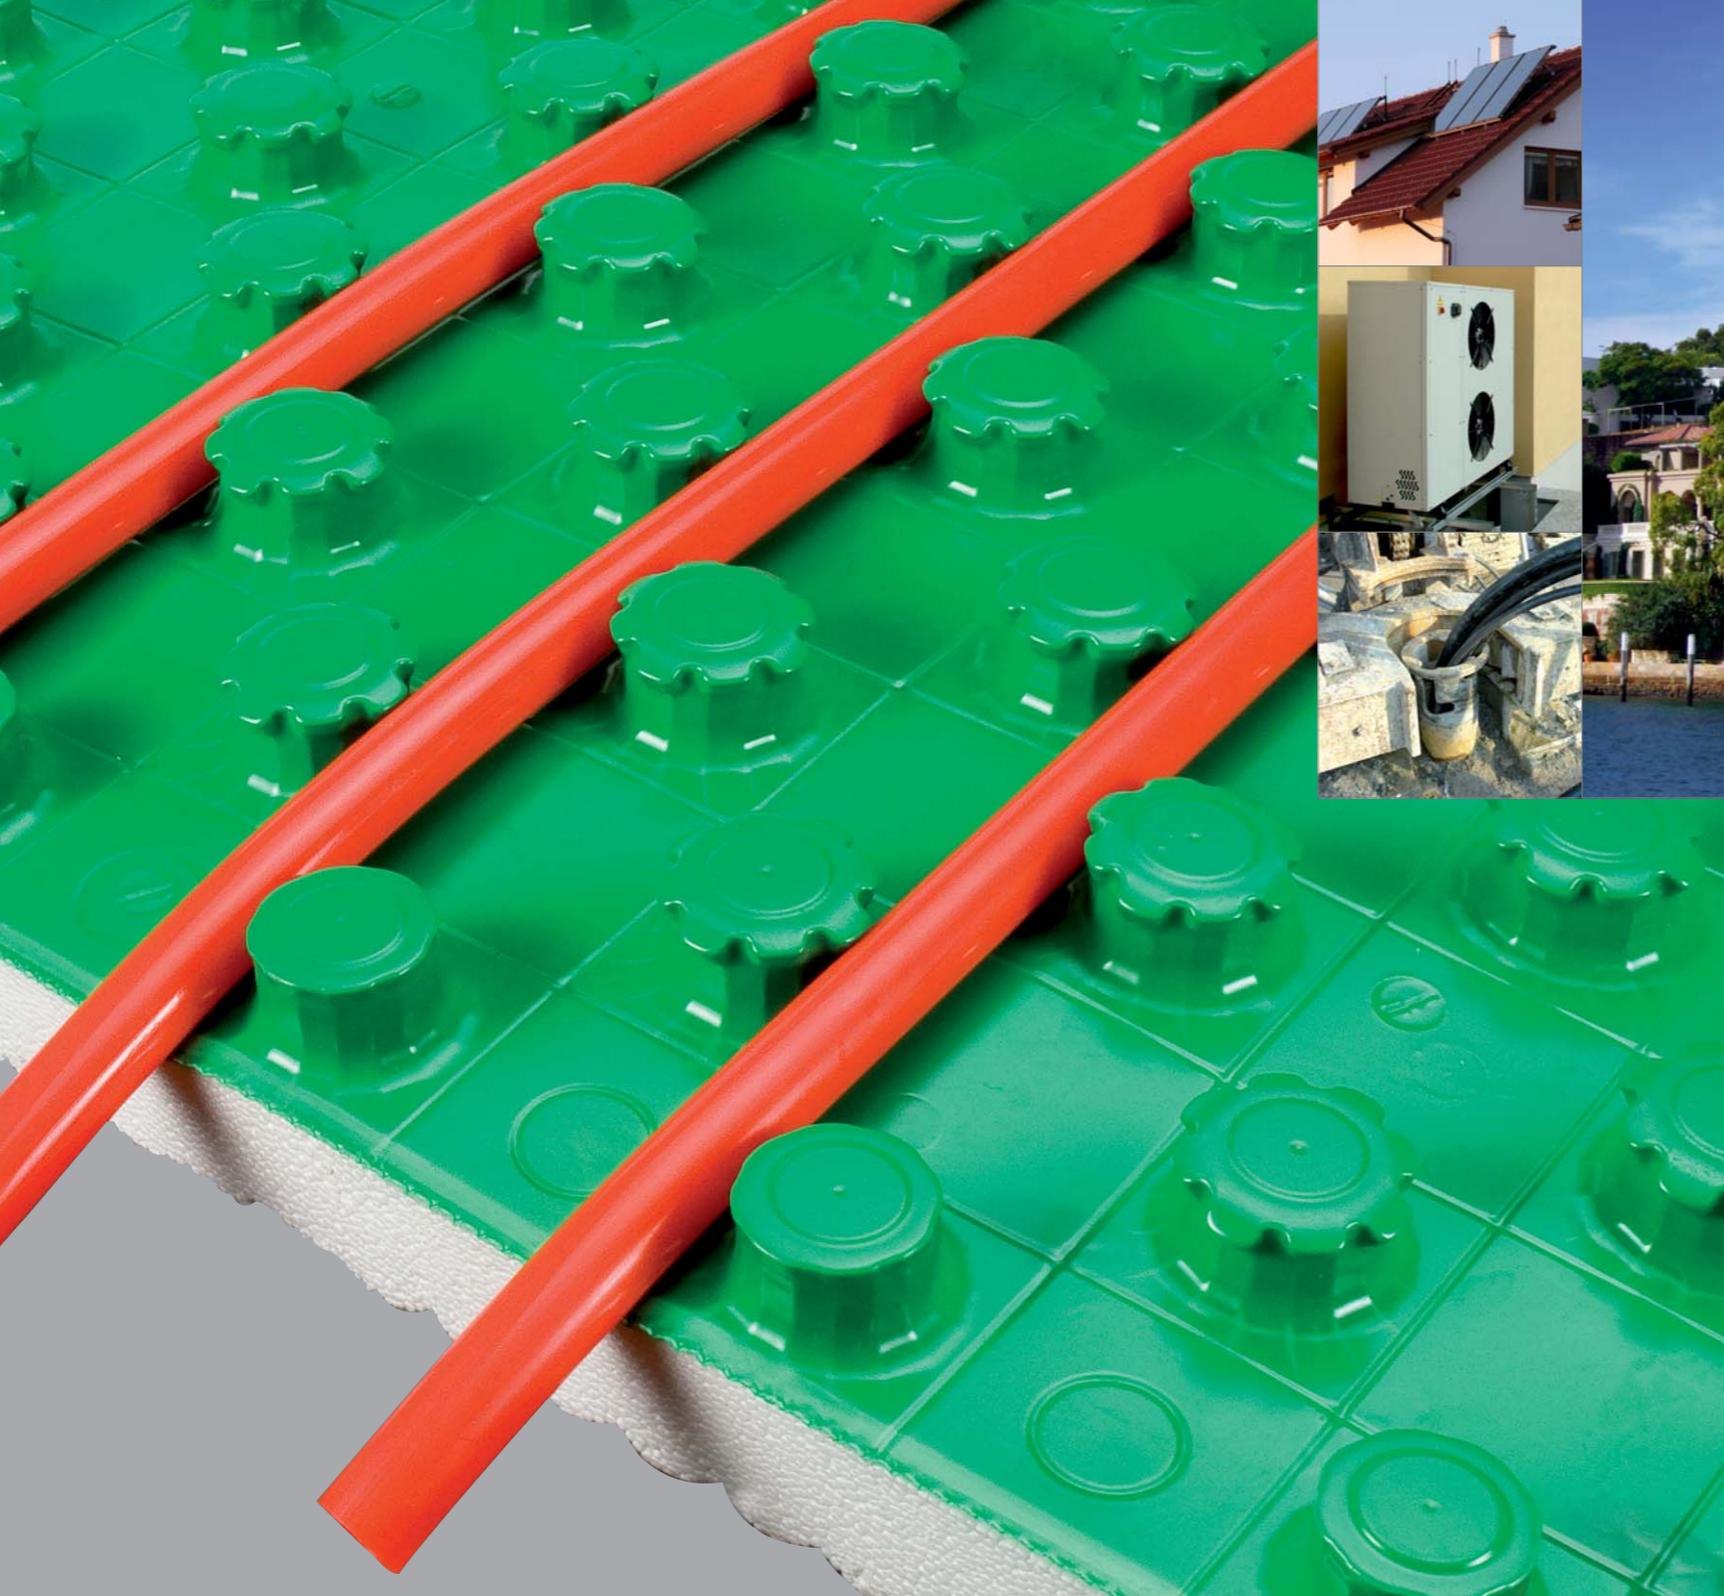

GIACOMINI 
Technology in Comfort

HEATING IN WINTER COOLING IN SUMMER WITH A SINGLE SYSTEM

○ Radiant panels provide to human body greater comfort than traditional heating systems. The sweet wellness sensation, as well as constant and uniform temperature in the rooms and the absence of convective movements produce the ideal climate with a reduced energy impact thanks to the low temperature of heating water. Today thanks to the modern heating/cooling control technique the radiant floor can be used also for the summer cooling of the rooms with great benefits in health terms: no stratification, total lack of air drafts and of noise and a healthy difference between building's internal and external temperature.

TOWARDS SUSTAINABLE CHOICES

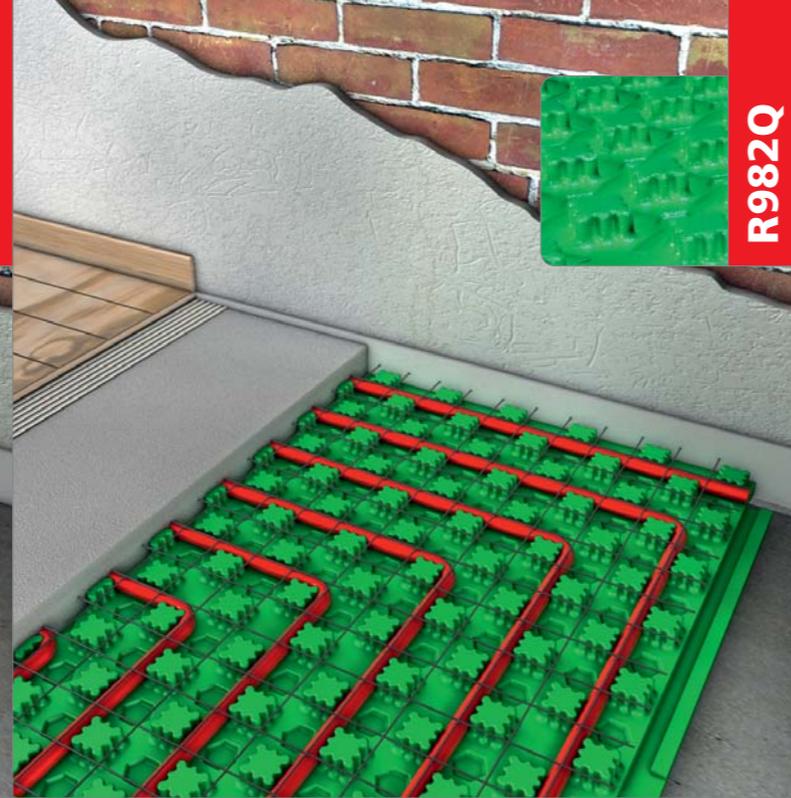

Reaching the Kyoto Protocol objectives, complying with the constraints of the European Union for 20% consumption of renewable energies by 2020, the obligation of energy certification of the buildings under European Directive 2002/91/CE are all factors that drive towards sustainable choices for systems installation in the buildings. Given that buildings account for 40% of energy consumptions in Europe energy efficiency can and should be improved and saving is the first energy source at our disposal!

THANKS TO RADIANT A WORLD OF NEW POSSIBILITIES

In such a varying scenario it is necessary to find innovative solutions, more efficient and with a reduced environmental impact. In this respect, the floor system operation is ideal if associated with state of the art highly efficient generators such as condensation boilers. The use of heat pumps is particularly beneficial for the low water temperature to supply to radiant panels; this allows using the costless and inexhaustible heat present in the air, in the water or in the land, reducing to the maximum the use of fossil fuels. During the summer to cool the rooms a geothermal system can be used as well, releasing heat of the basement environment through underground manifolds or depth sensors. The energy captured by solar panels, can be used also to integrate the heating: in this case, too, the prerequisite is to have a radiant panels system installed. In condo buildings using one only radiant system also for summer cooling offers an additional benefit: the chance to use centralised generators for cold, as for boilers in winter, with a huge efficiency recovery with respect to independent solutions.

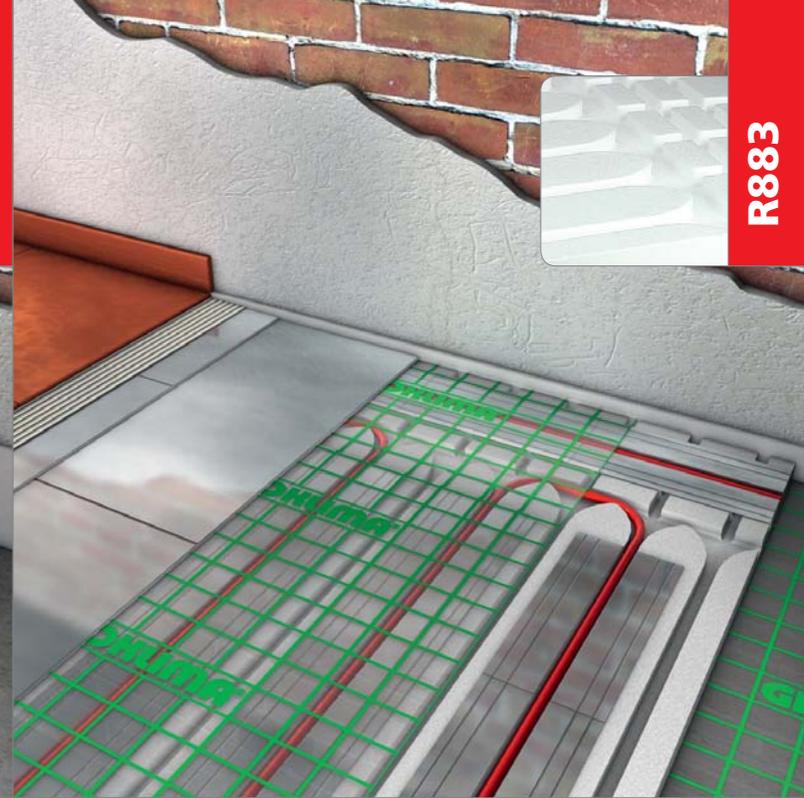

R979

R982Q

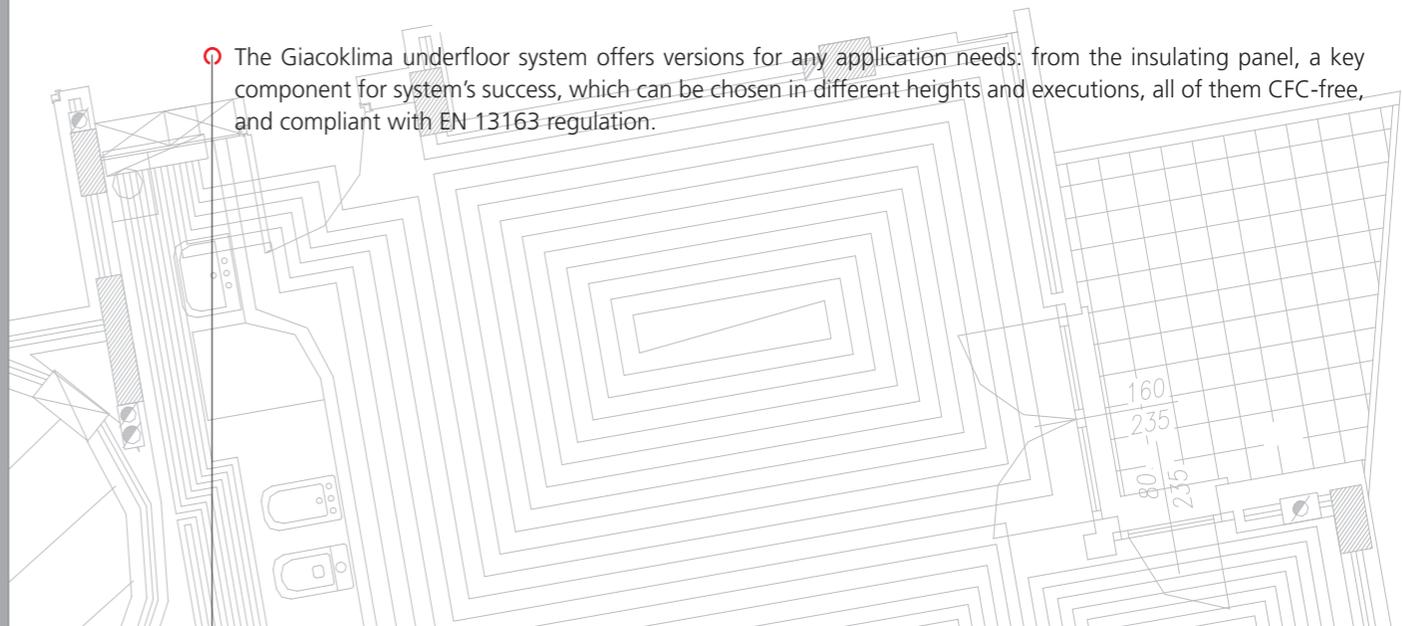

R981

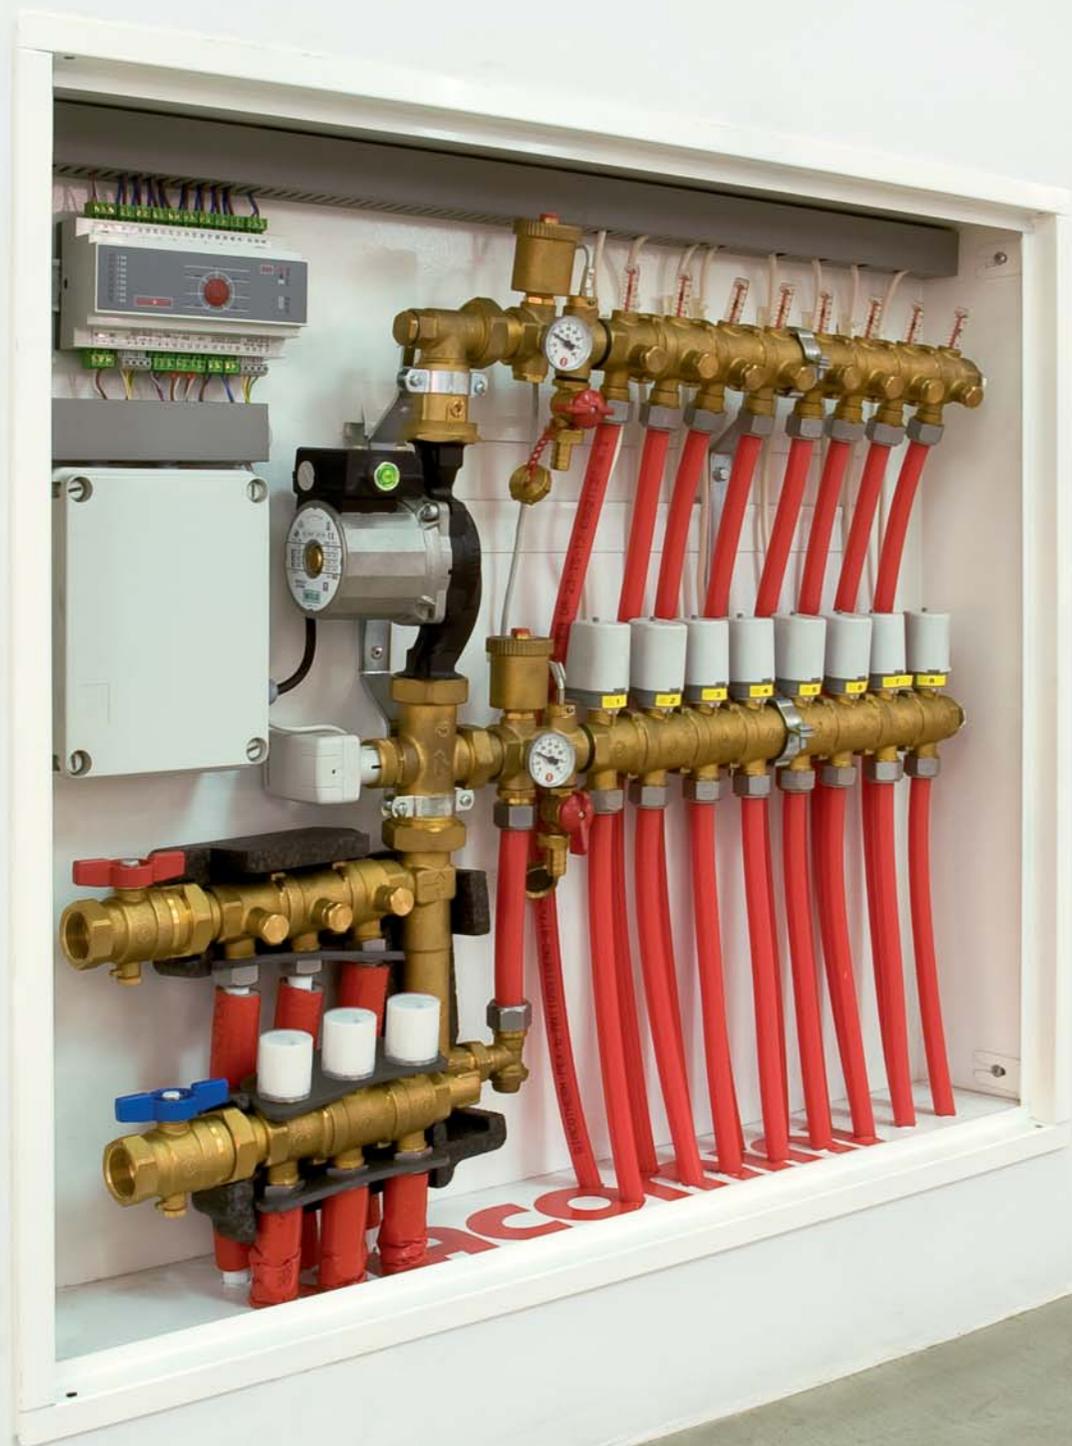

R883

- The **R979** and **R982Q moulded panels** represent the most classical solution to create the insulating layer. The special profile of moulded protuberances allows embedding firmly the pipe during the installation, without the need to use clips. The moulded polystyrene plate is coupled with a coating film that acts as a barrier for vapour and remarkably increases resistance to trampling.
- For large surfaces, such as industrial hangars, churches or sports centres the **R981 smooth panel** associated with clips or the K389W pipe fastening rail are the ideal solution. The rail accepts a large range of pipe diameters and allows installing rapidly and very precisely coils with multiple pitches of 50 or 100 mm. The function of barrier for vapour is executed installing on the smooth panel the **R984 protection sheet**.
- When there are limits of space in height, the use of the **R883 panel for dry installation** brings many benefits; thanks to its minimum overall size and to the specific milling to insert steel thermal diffusers and pipe, it is possible to make the radiant floor with a much reduced height. The system does not require the layer of concrete screed: to guarantee a uniform distribution of the loads the support function is provided by a double layer of zinc-plated steel blanks on which the final coating is directly applied.

A SYSTEM, MANY VERSIONS

R553F

R557R

R559

R553 manifold represents a simple and versatile solution: a supply manifold, with balancing lockshields equipped with mechanical memory embedded, and a return manifold, equipped with micrometric thermostatic valves are installed on two offset brackets that facilitate the piping connection. These valves allow, not only manual shut-off, but also the assembly of electro thermal actuators usually open (R478) or usually closed (R473). In the R553F version the supply manifold also has practical supply measuring devices.

R557R manifold is designed for heating systems with radiant panel with fixed point adjustment; a specific thermostatic supply head, temperature limiter, sets the supply temperature. In the same box it is possible to supply heating bodies with high temperature (as towel dryers, towel racks or radiators). The electronic circulator with variable supply and the safety thermostat are part of the standard equipment; the shut-off thermostatic valves, embedded in the return manifold, can be equipped with electro thermal actuators with end of stroke micro-switch (R478M or R473M) so to pilot automatically circulator switch-on and off.

R559 manifold runs assorted sophisticated radiant panel systems where, in addition to the heating function, is required the one of summer cooling. The supply temperature adjustment can be set at a fixed point or with external climatic compensation. A set of units, not mixed, in addition allows supplying heating bodies with high temperature (as towel dryers, towel racks or radiators) or fan coil units for summer cooling integration. Unit's standard equipment includes a circulator, a mixing unit and an adjustment power supply unit: the latter is part of the innovating family of Giacoklima bus technology heating/cooling control. Shut-off thermostatic valves, embedded in the return manifold, can be equipped with electro thermal actuators (R478 or R473).

OPTIMAL DISTRIBUTION

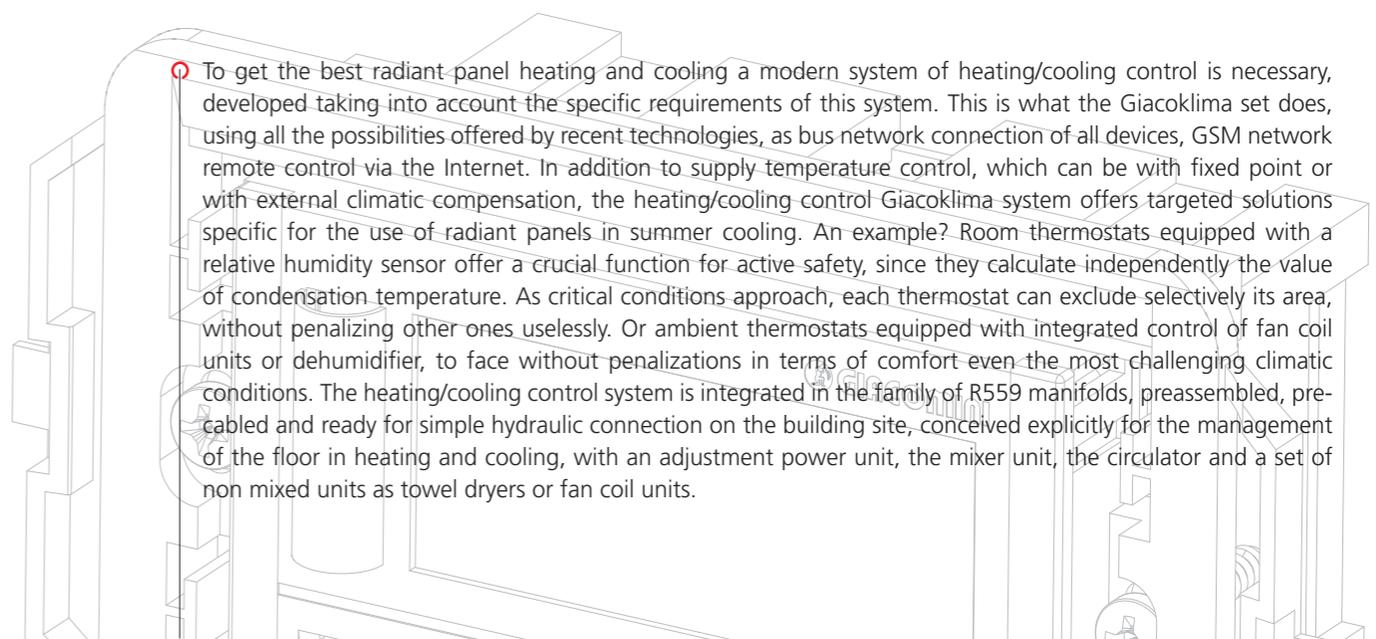

In a radiant panels system distribution manifolds have a basic function: supply water to every single circuit with the necessary supply for its optimal operation. Not all the systems have the same requirements: this is why in the Giacoklima system there is a wide range of options: from single components to build-units according to a wide range of installation situations, to functional manifolds, preassembled and pre-cabled, that offer completeness, simple installation and time saving.

INDIVIDUAL IS BETTER
 To use energy at best central temperature regulation of water delivered to radiant circuits is not enough: in these cases there is a risk of decreased comfort or overheating uselessly some rooms. Different needs come from the individual perception of heat and cold, from the different use of the rooms, their geographical exposure or the costless energy contributions from outside or inside. The individual heating/cooling control provides a rational and convenient solution to this problem that allows having in each room or in each area the most adequate temperature, associating comfort and energy saving.

**STATE OF THE ART
 HEATING - COOLING CONTROL**

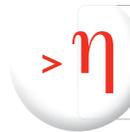

To get the best radiant-panel heating and cooling a modern system of heating/cooling control is necessary, developed taking into account the specific requirements of this system. This is what the Giacoklima set does, using all the possibilities offered by recent technologies, as bus network connection of all devices, GSM network remote control via the Internet. In addition to supply temperature control, which can be with fixed point or with external climatic compensation, the heating/cooling control Giacoklima system offers targeted solutions specific for the use of radiant panels in summer cooling. An example? Room thermostats equipped with a relative humidity sensor offer a crucial function for active safety, since they calculate independently the value of condensation temperature. As critical conditions approach, each thermostat can exclude selectively its area, without penalizing other ones uselessly. Or ambient thermostats equipped with integrated control of fan coil units or dehumidifier, to face without penalizations in terms of comfort even the most challenging climatic conditions. The heating/cooling control system is integrated in the family of R559 manifolds, preassembled, pre-cabled and ready for simple hydraulic connection on the building site, conceived explicitly for the management of the floor in heating and cooling, with an adjustment power unit, the mixer unit, the circulator and a set of non mixed units as towel dryers or fan coil units.

Reduced energy impact thanks to the operation with low temperature water

Single system for winter heating and summer cooling

Ideal associated with highly efficient generator as condensation boilers

Possibility of use of renewable sources such as geothermal and solar

Possibility of summer operation associated with units for the relative humidity slashing down

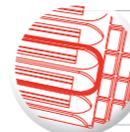

High comfort with uniform distribution of temperatures in horizontal and vertical, free from air drafts and dust circulation

Possibility of remote control via SMS or Internet

Smallest overall size in height in the dry version

Possible integration with radiant walls

Full and integrated system

Easy and fast installation

Wide range of variants for insulating panels, pipes, manifolds, heating/cooling control and fittings

Time and error saving with pre-assembled manifolds

Possible integration with radiant wall

Technical advice and targeted training

THE UNDERFLOOR SYSTEM BENEFITS

No maintenance

Highest freedom in the arrangement of furniture and recovery of useful space thanks to the absence of terminals in the room

Full bus technology heating/cooling control system

THE BENEFITS FOR THE INSTALLER

COMFORT and ENERGY SAVING

Global aluminium radiators allow easy and immediate control of the temperature in each room, saving energy and providing maximum comfort

WORKING AT LOW TEMPERATURE

Thanks to the high thermal conductivity of aluminium, Global radiators can also be used in installations with condensing boilers and low water temperatures

ENVIRONMENT

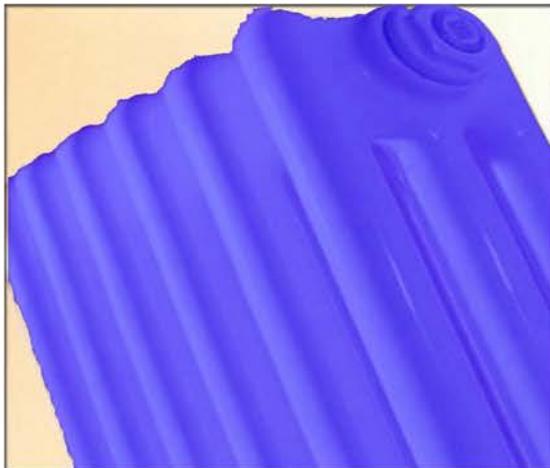

Global is the result of 40 years of experience and technological development; they look good, respond instantly to maintain desired temperature, save energy and they can be completely recycled.

GLOBAL radiators have a ten year guarantee starting from the date of manufacture. This guarantee covers the replacement of those elements that because of manufacturing or material defects are not usable, but only on condition that installation has been executed in compliance with suitable regulations and correct installation.

ardesia 22

Material:

Heads moulded in mild steel plate.
Tubes in mild steel electro-welded \varnothing 25 mm.

Packing:

The radiator is protected by a recycled film in polyethylene and with a box in recycled carton. User notice included.

Painting process

Painted with ecological epoxy powders.

Colours:

Standard white RAL 9010. Other colours surcharge 30%.

Ardesia®

is one the leading production of Cordivari. This complete range of radiator suitable for all private and communitarian living space expresses the best of Cordivari experience, leader from more than 25 years of the radiators production.

Radiators provided in separate batteries to facilitate transport and installation. Batteries can be joined together (nipping operation) with lock key smaller than 1 mt. Each couple of batteries inclusive of 2 nipples and 2 Cordivari seals. For batteries with more than 83 sections with lateral connection,

IMAS

APOLLO^{EXTRA} 22-DK

Manufactured

with the best production technologies to offer efficient convection and radiation, the new production of APOLLO EXTRA panels guarantees maximum yield in perfect comfort. These new panels have high heat radiance which is particularly important for system operating at low temperature. The well-produced design adapts to any furniture solution and the absence of sharp edges ensures perfect safety even very open rooms.

Painting: degreasing with hot phosphating. First coat with water – soluble primer and baking at 180°C according to DIN 55900 standard. Second coat with polyester epoxide powders, colour RAL 9010 (ice) baked at 220° C.

Packing

Every radiator is packed in ondulated cardboard and protected by a sheet of tough thermoretractile polyethylene.

Main Features A wide range of models subdivided into five heights and three thicknesses. Better heat emission than any other traditional heatingbody; Prompt working of the heating system. Easy to install even in remaining spaces. Top reliability guaranteed by careful finish and tasting.

SOLAR THERMAL SYSTEM FOR SANITARY WATER WITH FLAT PLATE COLLECTORS

THERMOSIPHON CIRCULATION SYSTEMS

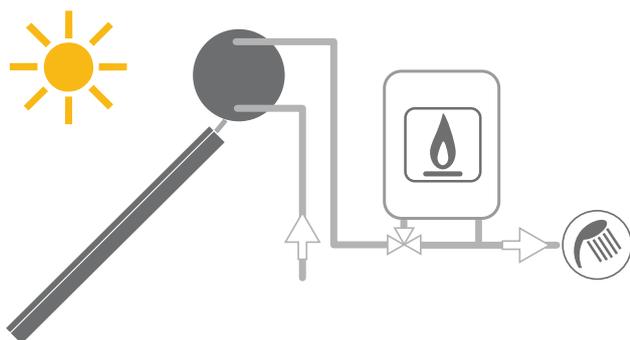

FORCED CIRCULATION SYSTEMS

SOLAR SYSTEM PANAREA

THERMOSIPHON SOLAR SYSTEM FOR DOMESTIC HOT WATER PRODUCTION

THE ONLY ONE WITH UNIVERSAL FIXING KIT INCLUDED

APPLICATION

The Solar Thermal System PANAREA is the most practical and economic solution, due to its reliability and because of an easy and quick installation.

SOLAR COLLECTOR

- Insulation in mineral wool
- Anodized aluminum structure
- Highly selective absorber
- Anti-hail tempered glass
- In compliance with **UNI EN 12975** and **12976** regulations
- DMC Certified

CALORIFIER

- **INTERKA POLYWARM®** with capacity from 150 to 300 lt
- Mild steel
- Internal coating Polywarm® suitable for drinking water according to the D.M. nr 174 of 06/04/2004 and DHW attestations ACS-SSICA-DVGW-W270-UBA-WRAS
- Connections for electrical heater integration
- Double walled heat exchanger
- High thermal insulation with ecological polyurethane hard foam and grey PVC external lining, upper top and flange cover in ABS.
- **PATENTED UNIVERSAL** fixing kit for flat

and pitched roof rapid mounting galvanized according to UNI EN 1179 (99,9 % PURE ZINC)

For more information see accessories section.

ASK ALWAYS FOR CERTIFIED LABORATORIES DATA RESULTS

CORDIVARI Lab

TÜV Rheinland Energie und Umwelt GmbH states that test procedures and Cordivari LAB are certified conforming to European standard EN 15332, as indicated by EArt. Nr.sign ErP Directive.

SYSTEM COMPONENTS

INCLUDED

Highly selective solar collector	✓
INTERKA POLYWARM® Calorifier	✓
Magnesium Anode	✓
Security valve and check valve	✓
Non-toxic heat transfer fluid	✓
Fittings	✓
Universal fixing kit for flat and pitched roofs	✓

INTERKA POLYWARM®

TANKS

HEATCO TANKS MODELS : DT , ST , HT and PV

HIGH STORAGE TANK

HT	Type (HT)	30	45	50	70	100	125	175	225	300	350	400	500	600	700	800	900	1000
	Height Tower (L) M	36	36	30	30	24	24	24	12	12	12	12	6	6	6	6	-	-
	Height Tank(H) Cm	350	450	350	450	450	550	565	475	575	675	775	590	690	790	890	990	1090
	Width (W) Cm	395	395	485	485	585	585	680	880	880	880	880	1160	1160	1160	1160	1160	1160
	Capacity m ³	34	45	53	70	102	128	175	232	290	348	406	515	619	722	825	928	1031

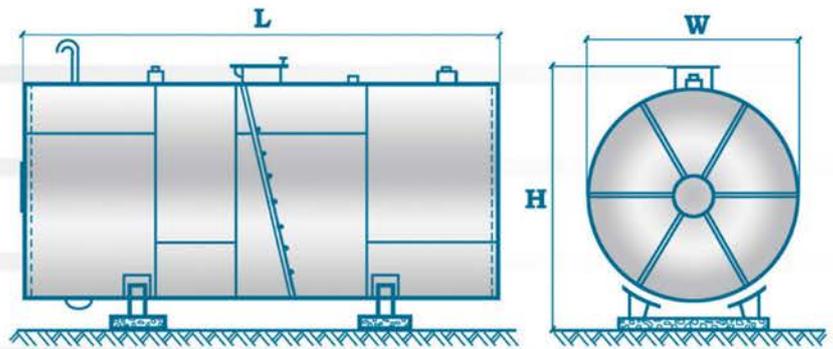

HT is a storage tank with high capacity and horizontal configuration, material could be made of carbon steel and stainless steel manufactured on site for floor mounting with steel and concrete towers, heights up to 36 meters for storage capacities up to 1000 ton and more.

PV is a pressure vessel tank (tailor made) For all above mentioned capacities bar with working pressure up to 50 bar.

-All UT and RT tests are available upon request for quality assurance.

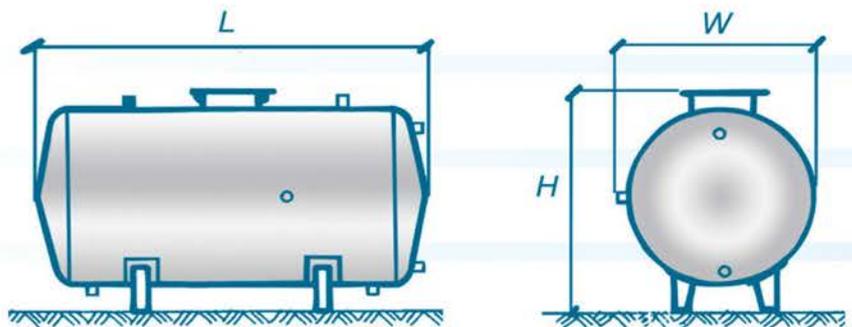

MONTHLY TANKS

ST	Type (ST)	5	6	7	8	10	11	14	17	20	25	30	40	45	50	60	70	80	90	100
	Tank Height (H) Cm	195	195	195	195	225	225	225	225	290	290	290	335	335	335	335	425	425	425	425
	Tank Length (L) Cm	250	300	350	400	350	400	500	600	400	500	600	500	600	700	800	600	700	800	900
	Width (W) Cm	159	159	159	159	191	191	191	191	254	254	254	318	318	318	318	382	382	382	382
	Capacity Lt	5000	6000	7000	8000	10000	11000	14000	17000	20000	25000	30000	40000	45000	50000	60000	70000	80000	90000	100000

ST is a monthly tank with medium and high capacities and horizontal configuration, or other kinds of material upon request, ST tank used for fuel stations, water reservoir, dairy industries with under soil special resistance coating as well as floor mounted with control equipment devices for automatic and manual operation.

DAILY TANK

DT	Type (DT)	30	50	75	100	150	200	200	300	400	375	450	500
	Height (H) Cm	85	85	120	120	120	120	120	155	155	155	155	155
	Length (L) Cm	100	150	100	150	200	150	300	250	300	325	350	400
	Width (W) Cm	63	63	95	95	95	127	95	127	127	127	127	127
	Capacity Lt	300	500	750	1000	1500	2000	2000	3000	3750	4000	4500	5000

DT is a daily tank with low and medium capacity and horizontal configuration, material could be made of carbon steel with special linings, stainless steel 304,304L, 316, 316L, galvanized steel or other kinds of material upon request, DT tank used for fuel, water, condensate, dairy industries and also so many other uses DT could be insulated for liquid with over and under ambient temperature .
